## Product Description

### What is 99% Purity Cosmetics Raw Material Acetyl Hexapeptide 8 White Powder Peptide For Skin?

Acetyl Hexapeptide 8 () is a synthetic anti-ageing cosmetic peptide derived from a natural protein. This peptide is thought to reduce the formation of wrinkles by binding to the SNARE receptor, thereby blocking the production of neurotransmitters and thus reducing the contraction of facial muscles. Acetyl Hexapeptide 8(Acetyl Hexapeptide-3) is effective in reducing the depth of wrinkles, particularly around the forehead and eyes, which are caused by the repeated contraction of facial muscles.

Acetyl Hexapeptide 8 () prevents the formation of skin wrinkles and inhibits the release of neurotransmitters at the neuromuscular junction.

Acetyl Hexapeptide 8(Acetyl Hexapeptide-3) competes for the SNAP-25 site in the fusion vesicle complex, thus affecting the formation of the complex. When the fusion vesicle complex is slightly unstable, the vesicles are unable to release neurotransmitters effectively, resulting in weakened muscle contraction and preventing wrinkle formation.
